

INCONTINENT SOLUTIONS

Are you one of millions who experience a loss of bladder control, resulting in the involuntary loss of urine?

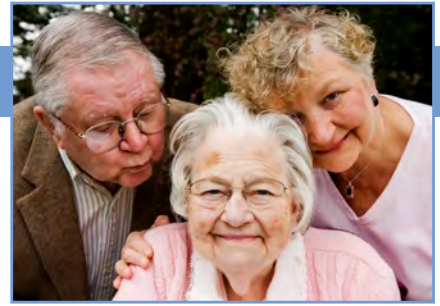

If you are unable to control when and where you urinate, this condition is called urinary incontinence. Urinary incontinence is a condition that can be treated, improved, and in some cases cured.

Some people are so embarrassed about having urinary incontinence that they will not talk to anyone about their problem. They may also think that incontinence cannot be treated or that it's just part of the aging process.

Incontinence Solutions Program

Your Source

for personalized incontinence education, consultation and management to help individuals experiencing any type of incontinence.

Types of Incontinence

Bladder leakage, also known as Incontinence, is a very personal and private issue. It can range from partial to full loss of bladder or bowel control.

Types of Incontinence include:

- Stress**
- Reflex**
- Functional**
- Urge**
- Overflow**
- Mixed**

The First Step

If you have incontinence, the first step is to meet with a trained healthcare professional to medically assess the type and cause of incontinence and develop a plan to help maintain or restore function.
